

A Few Suggestions on Conducting the Farm Visit

Develop initial thoughts and a plan on the Farm Visit

YOUR TEAM'S STYLE

- Develop a strategy up front
 - Approach
 - System
 - Determine each member's strengths
- Do not confine yourself to preconceived ideas
- Each farm is unique and therefore, one size does not fit all

Before you go and after the visit

- Review records that are available
 - Herd size & age pattern changes
 - Milk Production
 - Component shifts
 - Culling pattern
 - Somatic cell count/milk quality
- Review herd health history and trends
- Feed rations, history & forage test results
- Financial/Profitability information

Consult with Advisory Team

- Make sure you talk with key players
 - Owner
 - Veterinarian
 - Feed Representative
 - Banker
 - Others
- What are the perceived opportunities/challenges?

The On-Farm Visit Review

- Cows' environment
- Water supply, quality, and availability
- Rumination times/observations
- Feed bunk management
- Feed quality and form
- Foot and lameness score
- Evaluate manure
- Evaluate body condition/scores

Evaluate the Cows' Environment

- Housing Characteristics
 - Stalls
 - Air
 - Footing
- Cow response to environment
 - Stall usage
 - Walking
 - Cleanliness
- Exercise and cow care
- Cow response to people

Evaluate Feed Bunk Management

- Availability of feed
- Weigh back amounts and appearance
- Feed uniformity
 - Use cottonseed/pellet as marker
- Effective fiber (Penn State box)
- Feeding schedule & frequency
- Feed mixing procedures
 - TMR mixing sequence & time
 - Feed log, load sheet, and receipt

Feed Quality & Form

- Forage tests
 - Testing schedule
 - Results vs. Appearance
- Grain particle size
- Evaluate for mold (visual & odor)
- Evaluate forage particle length
- Look for heat damage, fines, & dustiness
- Measure pH of silages
